

plugins

Monday, April 7, 2025 12:33 AM

File-->Settings-->under setting find plugins

like for lombok to work properly you need to install lombok plugin

Here i was practicing Builder with reddy and I was getting error , chat gpt also did not help me but radib solved it right away.

```
4      import lombok.Builder;
5      import lombok.Data;
6      import lombok.NoArgsConstructor;
7
8      @Data
9      @Builder
10     @NoArgsConstructor
11     @AllArgsConstructor
12     public class BuilderExplaination {
13
14         //final
15
16         private int id;
17         private String name;
18         String college;
19         double attendancePercentage;
20         int classNumber;
21         int busNumber;
```

When you use annotations like above then

File-->Settings-->Build, Execution, Deployment-->Compiler-->Annotation Processors, select your project e.g., here WeeklyPractice Then Select Obtain processors fom project classpath, also thick mark Enable annotation processing, see the image.
